PROFESSIONAL SUMMARY

Senior Frontend Developer with 5+ years shipping production-grade, cross-platform fintech products trusted by thousands of users and enterprise clients. Deep expertise in TypeScript, React, React Native, and Next.js, with a sharp focus on server-state management (TanStack Query), real-time banking API integration, and performance. Owns frontend architecture end to end and an early, fluent adopter of AI-assisted development — pairing agentic coding tools with strong engineering judgment to move fast without cutting corners. Former operations professional with hands-on team-management experience, so leadership isn't theory.

CORE SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3, SCSS/Sass

Frameworks & Libraries: React.js, Next.js (App & Pages Router), React Native, Node.js, Express

State & Styling: TanStack Query, Redux, Zustand, Context API, Tailwind CSS, Styled Components, ShadCN/UI, NativeWind

Mobile: React Native, NativeWind, Xcode, Android Studio (iOS & Android)

Backend & Data: Supabase, PocketBase, PostgreSQL, REST APIs, Webhooks

DevOps & Deployment: Vercel, Netlify, Azure, Docker, GitHub Actions, CI/CD, VPS, AWS S3

Tooling & Practices: Git, Bitbucket, Jest, ESLint, Prettier, Figma, Postman, Jira, Agile/Scrum

AI-Assisted Development: Claude Code, OpenAI Codex, Cursor, OpenCode, Antigravity, GitHub Copilot — agentic coding workflows, AI-driven refactoring, and prompt engineering for faster, higher-quality delivery

PROFESSIONAL EXPERIENCE

Senior Frontend Developer (Software Engineer)

Transfez (YC W22) / Jack Finance — Jakarta, Indonesia (Remote)

Jan 2021 – Present

Transfez Group — backed by Y Combinator (W22) and MUFG Innovation Partners — operates consumer (Transfez) and B2B (Jack) fintech products. The Bank Indonesia-licensed B2B arm serves 600+ businesses across 140+ banks & e-wallets and 70+ destination countries.

- Joined as an early engineer before the company's YC W22 acceptance, architecting a cross-platform consumer transfer product (React Native + Next.js) that achieved 100% feature parity across iOS, Android, and web from a single source of truth.
- Built the frontend for a B2B international transfer product supporting 70+ destination countries, each with unique recipient form schemas and validation rules, plus real-time FX rates and multi-method payments.
- Implemented advanced server-state management with TanStack Query, reducing redundant API calls by ~60% and significantly improving responsiveness for high-stakes financial transactions.
- Engineered high-volume bulk transfer and payroll disbursement handling CSV/Excel uploads as paginated tables of thousands of rows, with per-row and bulk validation and real-time processing status polling.
- Developed the consumer transfer security layer — PIN entry with state machine, crypto-hashed submission, fingerprint authentication, and OTP with timer/resend — shipped across Malaysia→Indonesia and Singapore→Indonesia corridors.
- Established internal UI component libraries (ShadCN/UI + Tailwind CSS, NativeWind) that standardized design patterns, reduced development time, and improved consistency across all products.
- Owned end-to-end frontend architecture decisions — from state-management strategy to Azure and Netlify CI/CD pipelines — and drove code reviews that standardized quality across the team.
- Became the go-to engineer for 2-3 developers who regularly sought help debugging and solving problems in their own work, raising the team's overall delivery quality.

- Optimized Web Vitals and mobile render cycles, delivering measurable performance gains even when integrating with legacy banking infrastructure.
- Integrated AI-assisted development into daily workflow (Claude Code, Codex, Cursor, OpenCode), accelerating feature delivery and refactoring while keeping code quality and review standards high.

General Affairs Staff

BNI Syariah — Jakarta, Indonesia

May 2018 – Feb 2020

- Led and coordinated a team of non-staff personnel (office boys, drivers, security) for the head office — owning scheduling, overtime, and daily operations while enforcing discipline and clear standards across the unit.
- Handled general affairs and logistics: processed payment vouchers, managed office procurement, and negotiated facilities with the building owner (leased premises), before transitioning into software engineering.

FEATURED PROJECT

Architecture Firm ERP — *Solo full-stack build, live in production*

Designed and shipped a complete internal ERP single-handedly for an architecture firm — from database to UI — now running in production. Covers multi-division project tracking (architecture, civil, interior), client management, an A4 quotation & invoice editor with QR verification, role-based dashboards with Gantt charts, and financial reporting with PDF export, all on a custom RBAC system with granular per-role permissions.

React 19, TypeScript, PocketBase, TanStack Query, Tailwind CSS 4

EDUCATION

Universitas Gunadarma — Bachelor of Computer Science, Information Systems

2013 – 2017 · GPA 3.34

Hacktiv8 Indonesia — Fullstack JavaScript Immersive

Feb 2020 – Jul 2020

Intensive bootcamp covering the modern JavaScript ecosystem (React.js, Node.js, Express, PostgreSQL); built multiple full-stack applications from scratch.

ADDITIONAL

- **Languages:** Indonesian (Native), English (Professional Working Proficiency)
- **Work Style:** 5+ years remote-first in current role — async collaboration, self-management, cross-timezone delivery
